

Machine Identity and Secrets Automation

Automated lifecycle management for service principals, certificates, API keys, and secrets. Integration with enterprise vaults and native cloud secret managers. Elimination of hardcoded credentials in pipelines and applications. Automated rotation and expiration enforcement

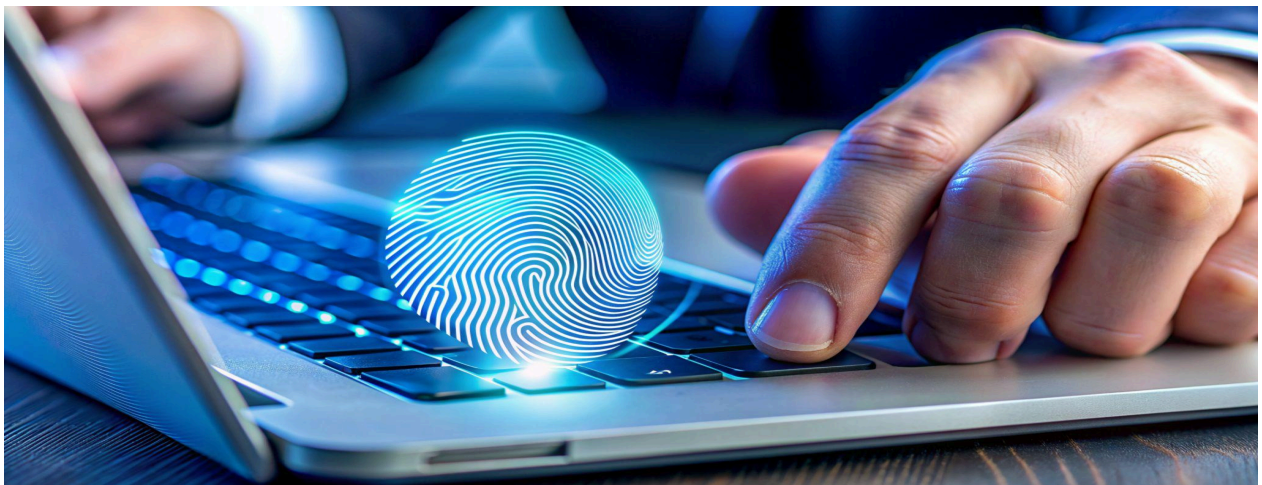

Machine identity becomes auditable, traceable, and secure by default.

Continuous Governance for the Invisible Perimeter

Real-time visibility into who has access to what. Immutable audit trails for all identity actions. Policy enforcement across hybrid and multi-cloud environments. Continuous compliance instead of point-in-time audits.

Governance becomes embedded, not reactive.

Outcome	User Impact	System Impact
Speed	Instant access for new hires	Zero-delay deployment for new workloads
Security	MFA and passwordless by default	No standing privileges or zombie credentials
Efficiency	Up to 90% reduction in IAM tickets	Automated credential rotation and cleanup
Compliance	Real-time access reporting	Immutable identity audit trails

Why Enterprises Choose iShift

- ✓ We operate as an **extension of your team**. Not a vendor
- ✓ We operate from a **zero-trust foundation**
- ✓ **We bridge identity** across legacy data centers, hybrid platforms, and cloud-native architectures.
- ✓ Deep experience at the intersection of **IAM, CloudOps, SecOps, and platform automation**.
- ✓ We **build, integrate, and deliver** operation-ready systems. Not just design and advise.

Modernize How Business Works. Securely, Intelligently, Together.
